Technical sheet 75422 - Ni-rich layered oxide cathodes

Source: battery-device-data-qa (Hugging Face, Apache-2.0), document_id 75422. Content reworded by the team; original article paragraphs are not reproduced because their own copyright was not verified.

Ni-rich layered oxides, NCA and NCM with a nickel fraction of at least 0.8, are presented as state-of-the-art cathodes for electric vehicle Li-ion batteries targeting more than 350 Wh/kg at cell level.

Components

Component	Value
Cathode family	Ni-rich layered oxides (NCA, NCM)
Ni fraction	x >= 0.8
Target	> 350 Wh/kg (cell level)

Table 1: components reported

Review note

The source mixes 'specific capacity' with an energy unit (Wh/kg): unit inconsistency noted.
