Technical sheet 75443 - Aqueous potassium-ion cell

Source: battery-device-data-qa (Hugging Face, Apache-2.0), document_id 75443. Content reworded by the team; original article paragraphs are not reproduced because their own copyright was not verified.

An aqueous K-ion cell uses a PTCDA-derived polymer (P10) as anode and potassium hexacyanoferrate as cathode. Saturated K2SO4 (about 0.69 M) and KNO3 (about 3.75 M) electrolytes were compared; KNO3 gives better rate capability due to higher conductivity.

Components

Component	Value
Anode	PTCDA-derived polymer P10
Cathode	Potassium hexacyanoferrate
Electrolytes	K2SO4 (~0.69 M) or KNO3 (~3.75 M)

Table 1: components reported

Review note

Annotations consistent with the paragraph.
